Profile

Computer Science graduate and software developer focused on building practical, real-world applications. Experienced with modern web, desktop, and mobile development using React, Next.js, TypeScript, Go, Electron, Docker, and SQLite. Strong interest in product development, business software, automation, and turning real-world problems into usable software systems.

Education

University of M'sila

M'sila, Algeria

Bachelor in Computer Science

2023 – 2026

- Focused on software development, programming, databases, algorithms, and practical application building.

Projects

Clothing POS – Point of Sale System

React, TypeScript, Electron, SQLite

- Developed a full-featured desktop point-of-sale system for clothing retail, covering core sales and inventory operations.
- Built the application with a focus on reliability, usability, and real-world business workflows.

SkillBridge – Academic & Career Platform

React, TypeScript, Tailwind CSS,
Supabase

- Built a platform designed to help students improve their academic and career development through practical digital tools.
- Developed it as a production-oriented application using a modern React/TypeScript stack with Tailwind CSS for the interface and Supabase for cloud data and backend services.

HAIOS – Agency Management & Automation System

React, TypeScript, Node.js, Go, Supabase,
n8n

- Designed a software ecosystem for managing agency operations, dashboards, services, and automation workflows.
- Worked across application layers, integrating modern web technologies with backend services and cloud data infrastructure.

Gym Management & POS System

Electron, React, TypeScript, Vite, Tailwind,
SQLite

- Developed a cross-platform desktop system for gym management, including members, subscriptions, plans, sales, and receipt printing.
- Implemented local database integration and business-oriented workflows for daily gym operations.

Digital Restaurant E-Menu

React, TypeScript, Tailwind

- Built a QR-based digital menu concept for restaurants, allowing customers to access menus directly from their phones.
- Designed the system around categories, products, offers, search, restaurant information, and a mobile-friendly experience.

Sign Language AI – Real-Time Computer Vision

Python, OpenCV, MediaPipe, Machine
Learning

- Built a real-time hand-tracking and sign language recognition system using Python, OpenCV, and MediaPipe, extracting 21 3D hand landmarks and normalizing them around the wrist for robust, scale-invariant features.
- Trained a Random Forest model on the extracted features, achieving 98.9% real-time accuracy on 24 ASL letters, with ongoing work on word assembly, LSTM-based dynamic signs, and Text-to-Speech translation.

Professional Experience

Sales Assistant – Retail Sector
Retail and commerce

M'sila, Algeria
2019 – 2023

- Managed customer interactions, direct sales, cash register operations, and stock handling.
- Developed practical communication, problem-solving, organization, and customer-service skills in a real business environment.

Technical Skills

Programming: C, C++, Python, Java, JavaScript, TypeScript, Go

Web Development: HTML, CSS, React, Next.js, Tailwind CSS, Node.js

Desktop & Mobile: Electron, Capacitor

Backend & Databases: Go, Node.js, SQLite, MySQL, Supabase

Developer Tools: Git, GitHub, Docker, Vite, Linux/WSL, n8n, Testing & Debugging

Languages

Arabic: Native

French: Intermediate

English: B2 (Upper-Intermediate)

Additional Skills

- Strong communication and teamwork developed through professional retail experience and collaborative software projects.
- Self-directed learner with a strong focus on modern development tools, software architecture, and shipping complete applications.
